Dear Mum-to-be,

Thank you for purchasing La Bassine birth pool.
We wish you a very happy and successful birth!

La Bassine has been designed for your comfort and to help you to have a natural, active birth. We want you to enjoy using your birth pool and other equipment. Therefore, it is very important that you read the following, prior to use.

IMPORTANT INFORMATION:

INFLATABLES REQUIRE CAREFUL HANDLING, TO AVOID PIN HOLES, CUTS AND ABRASIONS. WHEN INFLATING YOUR POOL, PLEASE ENSURE THERE IS NOTHING UNDERNEATH THAT COULD CAUSE DAMAGE.

WE STRONGLY RECOMMEND THAT YOU TEST YOUR POOL FOR POSSIBLE LEAKS, AT LEAST TWO WEEKS PRIOR TO EXPECTED USE.

TESTING YOUR POOL

INFLATE POOL, (SEE INSTRUCTIONS BELOW). THEN LEAVE FOR AT LEAST 4 HOURS.

PROVIDING THE POOL IS HOLDING AIR, YOU MAY THEN FILL THE POOL, UP TO ABOUT 6" WITH WATER. WATCH FOR POSSIBLE LEAKS ON YOUR FLOOR, FOR AT LEAST 1 HOUR.
YOU MAY THEN TOP UP YOUR POOL.

IF ANY PROBLEMS ARE DISCOVERED, PLEASE CONTACT US AT: info@madeinwater.co.uk immediately.

INFLATING YOUR POOL

DO NOT OVER-INFLATE YOUR POOL; over-inflation is the most common cause of air leaks.

1. INFLATE THE FLOOR FIRST, using a small needle adaptor, into the small valve in the floor.
2. INFLATE THE WALL, using the large black valve, until firm by inflating, after removing the top cap, which makes it a one way valve. Make sure that the small white valve close by, is closed.
3. If you are using a liner, it can be installed at this point.
4. Your pool is now ready to be filled. **To avoid possible weakening of the seams of the pool, please do not exceed 39 degrees C, (100 F) water temperature.**
5. FILL TO FILL LINE ON THE INSIDE OF POOL, you can make water level adjustments after you are submerged in the pool.

Emptying your pool

Your water pump will empty the pool quickly and efficiently, but bear in mind that the higher the water has to be pumped, the harder the pump has to work and the longer it will take. Therefore, if possible, empty pool into a drain, rather than an elevated sink.

Cleaning your pool

Once the pool is empty, wash the pool inside and out with a solution of warm water and soap(washing up liquid is fine), and a soft cloth. Rinse the pool with clean water (in the garden with a hose pipe is easiest) then wipe over the inside with a sterilising solution and kitchen towel. Leave the pool to dry thoroughly before packing away.

Deflating your pool

1. Open the base black valve on the side of the pool to let most of the air out, in the meantime deflate the floor with the smallest nozzle of the pump until all the air is removed.
2. A small amount of air will remain in the side of the pool. Replace the large black valve and continue deflating the walls through the small white valve. Insert the correct nozzle and continue deflating the walls with the pump until all the air is removed.
3. Ensure the walls are folded in over the base; fold the pool in half length ways before rolling it and placing it in its storage bag.
4. Store in a cool, dry place.

Manufacturer's Warranty

La Bassine Ltd warrants to the original purchaser only and is guaranteed as following:

Should any of our products be faulty in any way, due to a manufacturing defect, you must contact us immediately at info@madeinwater.co.uk

The faulty product will then have to be returned to us for inspection. If there is any defect in manufacturing, a replacement item will be sent out to you promptly.

We regret no refunds can be given for products which have been opened, are unsuitable for re-sale and do not have a manufacturing fault.

This warranty does not cover; punctures, cuts and abrasions sustained in careless use or improper storage. Over inflation is a major cause of leaks. Do not inflate with a compressor or high pressure pump. Inflating this item to full hardness can damage the seams.
